About

#### Published on Feb 24, 2008

A nice introduction to the insane recording/preservation project for Amiga based music. All playback done on real hardware and recorded on separate PC.

The end result is the worlds largest archive of authentic Commodore Amiga music!

- Based on 157 different Amiga formats.
- Total tunes played: 115342
- Total playtime: 282294 minutes
- Total playtime: 4704 hours
- Total playtime: 196 days

All MP3 recorded as-is in Amiga stereo, but also a blend stereo-mix is produced for better listening in headphones.

**FXCD Volume 1 by FX - Amiga Music Disk Demo - Made with AMOS**  
by Stone Oakvalley  
1,123 views

The end result:  
230684 MP3 files  
224Kbps 44100Hz CBR  
Approx 550GB

The largest Amiga Music MP3 archive ever produced.

WallPC mounted concept to save space.  
24/7 operation for 7-8 months!!

Visit [www.paula8364.com](http://www.paula8364.com) for its progress and more information about this incredible project by Stone Oakvalley Studios 2008. Higher resolution movie is also available for download.

Enjoy - Amiga Forever!

UPDATE MARCH 19, 2010:

The add-on recording project was finalized, boosting the collection up to 254692 MP3 files at the magical size of 992GB covering 194 music formats!

Sure, it'll take more processing power to emulate an Amiga, then load workbench, then load hippoplayer or something and then play it through that, but it doesn't take as much processing power as an mp3 to emulate the way an amiga sounds. The stereo effect has to be part of the project, because the end result is a collection of mp3s that sound a particular way. How about an app for android and ios that plays the files without need for config?

Reply · in reply to [Stone Oakvalley \(Show the comment\)](#)

**nicholasthetaylor** 10 months ago

I really like the idea of making the tunes more accessible. How about making a database with them, along-side the original files. Only problems with mp3 is that the file is bigger, take more processing to play and are poorer quality sound than the original, but like you say, they are more popular. Wouldn't it be a better and also easier project to make a player that doesn't require configuration and applies your effect on the fly? It'd save time, space, be just as convenient and sound better

**nicholasthetaylor** 11 months ago

I thought a bit more about it it and I came up with an idea so that I don't come across as too negative. How about making a database of all the music and having the option to download either the original file or the mp3 version that you made, as today the mp3 is more accessible for people with smart phones etc.

I don't quite understand this project, so maybe someone can explain it to me. Mp3 is a lossy format and are also going to be bigger than the original sound files. What happens to the original files? If the files aren't playing properly or how you want them to then a more worthwhile project would be to make a good open-source player instead that applies your stereo effect. Mp3 isn't going to be around forever, and it would be nice to preserve the original files as they are. Great work though

You are a legend

Reply ·

**vojinvicanovic79** 2 years ago

Good. Hope to see that 450GB or best portion of it, on the web download / tubes / music compils.

It might sound too chip nowadays, but compared to pre-Sound Blaster 16 sounds it was a symphony!

Now, its good that AmigaOS 4 lives even as of 2011 and that love for the Miggy has not died, too!

**vojinvidanovic79** 2 years ago

450GB of Amiga music! Big ode to Paula chip, which remained unchanged over all Amiga models! Respected work, verry verry nice video, could be used for SAM EP460 / Amiga x1000 promo with different text ;-))))

Much love from Serbia!

**1hdsquad** 3 years ago

Damn, Im shocked. Im listening to chiptune many hours every day since 3 years or so. I was looking for more tunes I havent heard yet. How am I supposed to download 550 GB of Amiga tunes? And how am I supposed to listen to them? Even if I can 'process' 6 hours of Amiga tunes every day Ill need more then two years :(

Someone has to make a bundle using only the best tunes, lets say 10 GB?

Thank you Stone Oakvalley, I will never forget what you have done! :)

There is..sort of.. mainly on the linux side and its called Python.. "What's old is new again.."

Reply · in reply to [Sam Stone \(Show the comment\)](#)

**stevieu83** 3 years ago

ARexx still works! Check out Python, too.

Amiga OS4.x makes use of both of them =]

Reply · in reply to [Sam Stone \(Show the comment\)](#)

**Sam Stone** 3 years ago

Aye that's true but I don't have an Amiga any more :(

The very concept was amazing - every program had an ARexx port so you could make use of every individual function of multiple programs just using a script - I remember I wrote a mandelbrot generator that made use of personal paint to draw the fractal. PPaint had a great ARexx port, so that you could read in the mouse coordinates when drawing a box, enabling fractal zooming of an area of the image as well!

Haven't used python though

**Sam Stone** 3 years ago

Utter genius ... on a side note, why isn't there something like ARexx any more? It was amazing.

Reply ·

Does anybody recognise the Amiga music used for the Commodore 64 orientation tape (don't ask!)?

Paste the following title into the bar:

Amiga music - Commodore 64 Introductory Audio Tape flip side (1990)

I've been a fan of the SID collection for a long time... and now an Amiga project? It really does seem too good to be true!!!  
The only problem so far has been the reliability of the servers. I would really like to see DVD sets...
